#### Next five days:

This week, a cold front will once again change the weather over the coffee-producing areas of the center-south of the country. On Monday, the cold front will continue to act near the coast of the southern region of the country and the rains should spread over the producing areas of Paraná in a more intense and widespread manner, but should also reach São Paulo and the south of Minas Gerais in the form of isolated showers, with moderate intensity. In the southeast areas, even if more irregularly, the rains will help to cause a decrease in heat and an increase in soil humidity. In the second half of the week, the system will advance along the southeast coast, spreading rains over the interior of Minas Gerais, including areas of the Cerrado, over Rio de Janeiro and by the end of the week the rains should reach the southernmost areas of Espírito Santo. However, this week, the rains should not yet reach the northernmost areas of Minas Gerais, northern Espírito Santo and the interior of Bahia.

### Weather/RainFall(mm) in Coffee regions

Attention: Each data above is the accumulated rainfall in the last 24 hours, collected from official meteorological stations, at 12:00 GMT (9:00 am local time) of the day. That values are interpolated to a grid point format, and indicates the mean rainfall of each region.

### Extended Forecast:

Next week, rains are expected to be concentrated over the northern half of Brazil, occurring in a more widespread manner and with significant volumes over producing areas between Minas Gerais, Espírito Santo and south-central Bahia. Moderate episodes are also expected to affect the areas of Alta Mogiana in São Paulo, while in other areas of south-central Brazil, dry weather is expected to intensify and temperatures are expected to rise again.
