Unchecked data from airport reports

Next five days:

Between this Friday and the weekend, a high pressure system will continue to maintain clear weather and low temperatures over the coffee-producing areas of the center-south of the country. Temperatures are expected to drop below 10°C in the highest areas, but there is no forecast of extreme cold and no forecast of frost. Isolated episodes of rain are expected to hit areas between Espírito Santo and the south of Bahia.

Attention: Each data above is the accumulated rainfall in the last 24 hours, collected from official meteorological stations, at 12:00 GMT (9:00 am local time) of the day.
That values are interpolated to a grid point format, and indicates the mean rainfall of each region.

Extended Forecast:

At the beginning of next week, a new cold front will advance through the South of Brazil and should once again spread some rain showers over areas between Paraná and southern São Paulo. However, this time the instabilities should not penetrate as far into the interior of the southeast region.
