Unchecked data from airport reports

Next five days:

Until this Friday, dry weather will prevail, with temperatures rising across most of the coffee-producing areas of south-central Brazil. However, a new cold front is forecast to advance over the weekend, which will once again spread more widespread and heavier rainfall over the coffee-producing areas of Paraná, São Paulo, Minas Gerais, and Espírito Santo between Saturday and Sunday. This system will be fast-moving but more intense than recent events, meaning some locations between São Paulo and Minas Gerais may receive more than 50 mm of rainfall between Saturday and Sunday.

Attention: Each data above is the accumulated rainfall in the last 24 hours, collected from official meteorological stations, at 12:00 GMT (9:00 am local time) of the day.
That values are interpolated to a grid point format, and indicates the mean rainfall of each region.

Extended Forecast:

Early next week, starting on Monday, the cold front will advance toward southern Bahia, and rainfall conditions will diminish in the interior of the Southeast, where dry weather is expected for most of next week. On Monday, the rain will advance through the interior of Bahia, reaching most of the state's producing areas with moderate intensity. Rainfall in central Bahia is expected to range from 20 to 30 mm.
