Unchecked data from airport reports

Next five days:

Over the weekend, rainfall will continue to decrease in the interior of Brazil, and dry weather will intensify over coffee-producing areas. Isolated rain showers are expected between the Southeast and Bahia regions, and most coffee-producing areas are not forecast to receive significant rainfall until the middle of next week. With longer periods of sunshine, the weather will become increasingly humid.

Attention: Each data above is the accumulated rainfall in the last 24 hours, collected from official meteorological stations, at 12:00 GMT (9:00 am local time) of the day.
That values are interpolated to a grid point format, and indicates the mean rainfall of each region.

Extended Forecast:

Next week should begin with dry weather and high temperatures, but from midweek onwards, moderate to heavy rainfall is expected, especially between São Paulo and southern Minas Gerais, due to the advance of a new cold front.
