Unchecked data from airport reports

Next five days:

Heavy rains are expected this Thursday in coffee-producing areas between northern São Paulo and southern Minas Gerais (Triângulo Mineiro). The rain will occur in the form of showers, but some areas of Alta Mogiana may receive more than 30mm. Between Friday and the weekend, the instability will decrease, but isolated and weak episodes are still expected. In areas of Espírito Santo and between southern and western Bahia, there are conditions for isolated episodes, generally with low accumulations.

Attention: Each data above is the accumulated rainfall in the last 24 hours, collected from official meteorological stations, at 12:00 GMT (9:00 am local time) of the day. That values are interpolated to a grid point format, and indicates the mean rainfall of each region.

Extended Forecast:

At the beginning of next week, dry weather will intensify and prevail in most coffee-producing areas, but in the second half of the week, the passage of a new cold front will bring rain back to the producing areas of the south-central region.
