Unchecked data from airport reports

Next five days:

Dry weather and rising temperatures continue to prevail over most coffee-producing areas, and conditions remain favorable for bean ripening and harvesting. Maximum temperatures are expected to reach values between 28 and 32 °C in the Alta Mogiana Paulista, Cerrado Mineiro, and Espírito Santo regions. In northern Espírito Santo and southern Bahia, isolated episodes of light and brief rain are forecast.

Attention: Each data above is the accumulated rainfall in the last 24 hours, collected from official meteorological stations, at 12:00 GMT (9:00 am local time) of the day. That values are interpolated to a grid point format, and indicates the mean rainfall of each region.

Extended Forecast:

Starting next Sunday, the passage of a cold front along the Southeast coast will help increase instability, but rainfall should still be mostly restricted to the eastern part of the region, with very isolated episodes possible as far as Alta Mogiana, southern Minas Gerais, and the Zona da Mata Mineira, while in Espírito Santo, rainfall should be somewhat more intense, especially in the south of the state.
