Unchecked data from airport reports

#### Next five days:

Dry weather will continue to prevail throughout the week over the coffee-producing areas of south-central Brazil, and temperatures will vary widely throughout the day, with cooler mornings and quite hot afternoons until the weekend. Isolated showers are expected in northern Espírito Santo and southern Bahia.

### Weather/RainFall(mm) in Coffee regions

Region	05-05	06-05	07-05	08-05	09-05

## Observed daily rainfall and Total/Normal in the May

Region	02-05	03-05	04-05	Total	Média	Desvio(%)
PAR	0	0	0	0	110	-100
SSP	0	0	0	0	95	-100
AMOG	0	0	0	0	58	-100
BMOG	0	0	0	0	64	-100
SMG1	0	0	0	0	66	-100
SMG2	0	0	0	0	55	-100
CER	0	0	0	0	38	-100
ZM	0	0	0	0	26	-100
NES	0	0	0	0	66	-100
SES	0	0	0	0	43	-100
BA	0	0	0	0	24	-100

Attention: Each data above is the accumulated rainfall in the last 24 hours, collected from official meteorological stations, at 12:00 GMT (9:00 am local time) of the day. That values are interpolated to a grid point format, and indicates the mean rainfall of each region.

### Extended Forecast:

Over the next weekend, a new cold front will advance through the south-central region of the country, and this system should bring isolated rain showers to coffee-producing areas between São Paulo and southern Minas Gerais. However, the most significant change will be the drop in temperature after May 10th. Minimum temperatures are expected to reach slightly below 10°C in parts of southern Minas Gerais at the beginning of next week, but for now there is no indication of extreme cold or risk of frost in coffee-growing areas.
