#### Next five days:

This weekend, the formation of a new cold front between the South and Southeast will once again spread rain over parts of the coffee-producing areas in the south-central region of the country. Episodes of heavy rain are expected over areas between northern Paraná and south-central São Paulo between Saturday and Sunday. Between the end of Sunday and Monday, the rain will spread further, reaching the Alta Mogiana, southern and Triângulo Mineiro regions, the Zona da Mata region of Minas Gerais, and Rio de Janeiro, albeit in a more moderate form. Temperatures are expected to be milder due to the more humid weather.

### Weather/RainFall(mm) in Coffee regions

Region	15-05	16-05	17-05	18-05	19-05
PAR	PC-6	CH-18	PC-10	PI-2	PN-0

Attention: Each data above is the accumulated rainfall in the last 24 hours, collected from official meteorological stations, at 12:00 GMT (9:00 am local time) of the day. That values are interpolated to a grid point format, and indicates the mean rainfall of each region.

### Extended Forecast:

Throughout the next week, instability will continue to affect the Southeast region, and moderate rainfall events are forecast between southern São Paulo, the Zona da Mata region, and the Triângulo Mineiro region. Until May 20th, rainfall is also expected to occur more frequently over areas between Rio de Janeiro and Espírito Santo.
