Unchecked data from airport reports

Next five days:

The weekend will be marked by predominantly dry weather in the coffee-producing areas of inland Brazil. A mass of dry air is intensifying, ensuring clear skies and a wide temperature range. This condition of dry weather and higher afternoon temperatures should persist until the middle of next week, favoring the progress of the coffee harvest. The dry weather is gaining strength and will also predominate between Espírito Santo and southern Bahia.

Attention: Each data above is the accumulated rainfall in the last 24 hours, collected from official meteorological stations, at 12:00 GMT (9:00 am local time) of the day. That values are interpolated to a grid point format, and indicates the mean rainfall of each region.

Extended Forecast:

The weather will only change again in the second half of next week, when a cold front will move through the south-central part of the country and spread moderate rainfall over most of the coffee-producing areas of the Southeast.
