Moderate 30 to 60 mm Heavy 60 to 100 mm Extreme above 100 mm

 NEXT 5 DAYS ANALYSIS

On this Wednesday, instability areas begin to spread between Paraná and southern São Paulo due to the approach of a cold front. Isolated rain episodes may affect coffee-producing areas in the interior of São Paulo starting Wednesday and intensify between Thursday and Friday, accompanied by strong gusts. By Friday, showers should reach parts of Alta Mogiana. These conditions may temporarily interrupt the harvest and drying of the grains. Dry weather and low humidity continue to prevail in the Cerrado and interior of Minas Gerais, favoring the harvesting, drying, and transportation of the grains. Between Espírito Santo, southern Bahia, and parts of Zona da Mata Mineira, isolated and brief rain episodes are forecast. Temperatures tend to rise, with no risk of extremes in coffee-growing areas.

RAINFALL FORECAST

Forecast daily accumulated rainfall (mm) for the next 5 days.

 EXTENDED FORECAST ANALYSIS

Between the weekend and early next week, rain intensifies over the eastern strip of the Southeast but is not expected to spread significantly into the interior of the region. Overall, in most of the interior of São Paulo and Minas Gerais, conditions will be favorable for field activities next week.
