Moderate 30 to 60 mm Heavy 60 to 100 mm Extreme above 100 mm

 **NEXT 5 DAYS ANALYSIS**

Between this Wednesday and Thursday, the rain forecast for São Paulo, the south-central and western regions of Minas Gerais, Cerrado Mineiro, and south-central Espírito Santo, due to the passage of a cold front, may temporarily interrupt remaining harvesting and drying operations. On the other hand, the precipitation tends to increase soil moisture and alleviate water stress in the crops in areas receiving the higher volumes. Today's forecasts indicate about 10 to 15mm of rain between Alta Mogiana, the South, Zona da Mata, and Cerrado Mineiro. Water plays an increasingly important role for the opening and especially for the fruit set of the blooms; however, isolated rains followed by intense heat and a new dry period may stimulate uneven blooming and increase the risk of fruit drop. In western Bahia, hot and dry weather maintains the need for attention to irrigation management, water stress, and fire risk.

**RAINFALL FORECAST**

Forecast daily accumulated rainfall (mm) for the next 5 days.

| Region | 26/08 | 27/08 | 28/08 | 29/08 | 30/08 |
|--------|-------|-------|-------|-------|-------|
| PAR    | 4     | 0     | 0     | 0     | 1     |
| SSP    | 5     | 0     | 0     | 0     | 0     |

Alert below 0 °C    High 0 to 2 °C    Moderate 2 to 4 °C    Low 4 to 5 °C    None above 5 °C

 **EXTENDED FORECAST ANALYSIS**

In addition to the rain expected this week, another system is forecast to advance over the coffee-producing areas between Tuesday and Wednesday (09/01 and 09/02) next week, spreading more significant and widespread rains over São Paulo and southern Minas Gerais, and more localized rainfall over other areas of Minas Gerais interior and Espírito Santo. For now, rains will

continue alternating with dry days, accompanied by heat peaks.
