BA	0	0	0	19

Moderate 30 to 60 mm

Heavy 60 to 100 mm

Extreme above 100 mm

📅 NEXT 5 DAYS ANALYSIS

Between this Friday and the weekend, dry weather intensifies in the main coffee-producing areas, especially in the Southeast region. The presence of a distant cold front over the ocean still favors the occurrence of heavy showers, primarily over the production areas of southern Bahia. In the interior of Brazil, the weather remains stable with a gradual rise in temperatures. By the end of Sunday, new instabilities will begin to advance over São Paulo, associated with the arrival of a new cold front from the South of Brazil. The heavier rains are expected to concentrate in the Southern Region, but between Sunday and the beginning of next week, moderate showers are also expected to spread across São Paulo's coffee-producing areas. The highest volumes and most widespread rainfall are anticipated in the southern and eastern belt of the state, while localized precipitation may reach the Alta Mogiana Paulista and southern Minas Gerais, with accumulations near 20 millimeters per day.

RAINFALL FORECAST

Forecast daily accumulated rainfall (mm) for the next 5 days.

Region	18/09	19/09	20/09	21/09	22/09

📅 EXTENDED FORECAST ANALYSIS

From the middle of next week, a cold front is expected to advance along the Southeast coast, intensifying instabilities and making the rainfall more widespread over coffee-producing areas. The most significant volumes are expected between São Paulo, southern Minas Gerais, and the Zona da Mata region, as well as

in the southern parts of Espírito Santo. In some locations, accumulations may range between 50 and 80 millimeters throughout the second half of next week.

The increased frequency and intensity of rains will contribute to higher soil moisture but may also cause temporary interruptions in field operations, especially during periods of more persistent rainfall.
