Moderate 30 to 60 mm Heavy 60 to 100 mm Extreme above 100 mm

 **NEXT 5 DAYS ANALYSIS**

At the beginning of this week, a cold front on the Southeast coast favors the formation of instabilities and rainfall in coffee-producing areas. The highest volumes are expected in Rio de Janeiro, where rainfall may locally reach 90 mm. In the Zona da Mata region of Minas Gerais, accumulations may range from 30 to 50 mm. Moderate showers are also forecast for the Minas Gerais interior, the Triângulo Mineiro, and the Cerrado, with localized amounts around 30 mm. The southern part of Espírito Santo may experience moderate to heavy rainfall, while in the São Paulo interior, showers should be more isolated with low accumulations. Starting Tuesday, rainfall tends to decrease in the Minas interior, Espírito Santo, and Bahia, with the advancement of dry weather in the following days. Moderate showers may still occur in Zona da Mata, southern, and Triângulo Mineiro. In São Paulo, new instabilities arriving from southern Brazil should cause more widespread and heavy rain, with accumulations between 20 and 60 mm, especially in the southern and eastern parts of the state. In the second half of the week, rain becomes more scattered in São Paulo. Dry weather is expected to intensify in Minas Gerais, Espírito Santo, and Bahia. Temperatures will remain mild for most of the week due to unstable weather, but in the latter half, they tend to rise, particularly in the Minas interior.

**RAINFALL FORECAST**

Forecast daily accumulated rainfall (mm) for the next 5 days.

| Region | 05/10 | 06/10 | 07/10 | 08/10 | 09/10 |

 **EXTENDED FORECAST ANALYSIS**

During the weekend, instabilities are expected to increase over the Southeast with the advance of a new meteorological system coming from the South of the country. On Saturday, moderate and more widespread rain is anticipated across São Paulo, southern Minas Gerais, and Rio de Janeiro. On Sunday, instabilities will spread to other areas and strengthen, especially along the eastern belt of the Southeast. At the beginning of next week, new instabilities should reinforce rainfall in the São Paulo interior. Between Monday and Wednesday, high volumes are forecast for a large part of the São Paulo interior.
