OBSERVED WEATHER

Maximum and minimum temperatures observed on the previous day (25/10/2026).

Region	Minimum Temperature (°C)	Maximum Temperature (°C)
PAR	19,1	27,3
SSP	20,5	25,0
AMOG	19,4	24,6
BMOG	18,3	24,9
SMG1	19,0	24,1
SMG2	18,5	23,0
CER	18,4	30,2
ZM	18,6	30,9
NES	22,6	36,0
SES	17,7	28,6
BA	18,6	35,0

Minimum temperature <= 5 °C

Maximum temperature >= 30 °C

Daily accumulated rainfall from the previous three days and monthly accumulated total to date. The monthly accumulation considers the period from 01/10/2026 to 25/10/2026.

Region	Observed Accumulated Rainfall (mm)			
	23/10	24/10	25/10	Monthly total
PAR	21	10	8	383
SSP	20	31	62	320
AMOG	4	4	42	214
BMOG	48	1	86	341
SMG1	4	3	28	211
SMG2	35	1	67	309

NES	22	1	25	123
SES	5	6	18	178
BA	0	9	1	80

Moderate 30 to 60 mm

Heavy 60 to 100 mm

Extreme above 100 mm

📅 NEXT 5 DAYS ANALYSIS

The week begins with the presence of a cold front over the ocean, off the coast of Espírito Santo and southern Bahia. This system promotes the formation of strong instabilities, with forecasts of heavy rain between Monday and Tuesday in northern Espírito Santo, northern Minas Gerais, and the interior of Bahia. In the coffee producing areas, the higher rainfall amounts are expected to increase soil water availability but may also cause interruptions in field activities. The rains will also reach areas of the Cerrado, with greater intensity on Tuesday.

On Wednesday, precipitation becomes more localized between Espírito Santo and Bahia, but there remains a risk of heavy rain, especially in northern Espírito Santo. From this day forward, new instabilities will also advance through the interior of Brazil, with showers forecast in the coffee producing regions of São Paulo and southern Minas Gerais.

In the second half of the week, instabilities are expected to intensify, and rainfall tends to spread across the South-Central region of the country, particularly between Thursday and Friday. Elevated rainfall volumes are anticipated in São Paulo, southern Minas Gerais, and the Triângulo Mineiro. The precipitation may be stormy, with gusty winds and possible hail.

Temperatures are expected to decrease in the South-Central region due to the influence of a slightly cooler air mass. Further north, the humid conditions should maintain mild temperatures, below the values recorded in recent days.

RAINFALL FORECAST

Forecast daily accumulated rainfall (mm) for the next 5 days.

Region	26/10	27/10	28/10	29/10	30/10

EXTENDED FORECAST ANALYSIS

During the weekend, rainfall is anticipated to spread across most coffee producing areas in the Southeast and also in southern Bahia. Significant volumes are again expected in northern Minas Gerais, Espírito Santo, and southern Bahia.

The week is forecast to be quite wet, favoring a more homogeneous distribution of soil moisture. On the other hand, the frequency of rainfall may lead to interruptions in field activities.

REGION LEGEND

PR: PAR - Londrina.

SP: SSP - Marília; AMOG - Franca; BMOG - Itapira.

MG: SMG1 - São Sebastião do Paraíso; SMG2 - Varginha; CER - Patrocínio; ZM - Manhuaçu.

ES: NES - São Mateus; SES - Santa Teresa.

BA: BA - Vitória da Conquista.
