BA	2	0	0	2

Moderate 30 to 60 mm Heavy 60 to 100 mm Extreme above 100 mm

NEXT 5 DAYS ANALYSIS

This Wednesday (4), areas of instability cause isolated showers ranging from weak to moderate in the interior of Minas Gerais and Espírito Santo, with volumes around 10 mm. In the coffee-producing areas of São Paulo, the South and Triângulo Mineiro regions, and the interior of Bahia, the probability of rain is lower and the heat intensifies in the afternoon. By the end of the day, the approach of a cold front increases the risk of storms in southern São Paulo. On Thursday (5), rain advances through the interior of São Paulo and reaches parts of Minas Gerais. In the central, southern, and eastern half of São Paulo, accumulations may reach 50 mm, with the risk of storms, strong winds, many lightning strikes, and possible hail. In Alta Mogiana, southern Minas Gerais, Zona da Mata, and the central region of Minas Gerais, volumes tend to be lower, between 15 and 20 mm, mainly in showers late in the day. On Friday, the cold front advances offshore and spreads instabilities throughout the region; between that day and the weekend, moderate showers may occur in northern Minas Gerais, Espírito Santo, and southern Bahia. On Saturday and especially Sunday, new instabilities should reinforce rain in the Southeast. On Sunday, point accumulations of 50 to 60 mm are expected in areas of São Paulo and 30 to 40 mm between Minas Gerais and Espírito Santo. With the rain, heat tends to decrease, especially starting from the weekend.

RAINFALL FORECAST

Forecast daily accumulated rainfall (mm) for the next 5 days.

Region	04/11	05/11	06/11	07/11	08/11

EXTENDED FORECAST ANALYSIS

At the beginning of next week, between Monday and Tuesday (9 and 10), instabilities will be more concentrated in the northern half of Brazil. In coffee-producing areas, rain may be more intense and persistent in the Cerrado Mineiro, central and northern Minas Gerais, Espírito Santo, and Bahia, with accumulations of 30 to 50 mm in many localities. Meanwhile, in the central-southern part of the country, a dry and cold air mass favors clearer weather and temperature drops. Early mornings will be cooler: on Tuesday (10), minimum temperatures may reach 12 °C in interior areas of São Paulo and southern Minas Gerais, and around 10 °C in the coldest areas of Minas Gerais.
