SES	9	3	30	117
BA	0	0	10	35

Moderate 30 to 60 mm Heavy 60 to 100 mm Extreme above 100 mm

NEXT 5 DAYS ANALYSIS

Between Friday and the weekend, strong instabilities are expected to act in the northern part of the Southeast region and the interior of Bahia. On Friday, moderate intensity rains may affect Rio de Janeiro, Zona da Mata, central and northern Minas Gerais, Cerrado regions, Espírito Santo, and southern Bahia, with localized volumes between 20 and 30 mm. Even without very high accumulations, there is a risk of thunderstorms with wind gusts and localized hail, especially in southern Minas Gerais. In southern Minas Gerais, the Triângulo Mineiro, and São Paulo, rain tends to be more isolated and with low volumes, but isolated storms cannot be ruled out. The heat is expected to intensify on Friday afternoon and increase further on Saturday, favoring the formation of instabilities. On Saturday, rain will be more concentrated in Espírito Santo, the central-south of Bahia, and northern Minas Gerais, where accumulations may exceed 30 mm in isolated spots. In southern Minas Gerais and São Paulo, the weather should be clearer and very hot, with temperatures above 30 °C in many locations, especially in the warmer areas between São Paulo and Triângulo Mineiro. In these regions, rain will be quite localized but may be accompanied by thunderstorms where the weather is stuffy. On Sunday, instabilities tend to spread through the interior of São Paulo and areas of Minas Gerais, generally with low accumulations, while moderate volumes are expected in the interior of Bahia.

RAINFALL FORECAST

Forecast daily accumulated rainfall (mm) for the next 5 days.

Region	13/11	14/11	15/11	16/11	17/11

EXTENDED FORECAST ANALYSIS

Next week is expected to start with more intense instabilities concentrated in the northern part of the Southeast and the interior of Bahia. In other areas, including central-south Minas Gerais, interior São Paulo, and southern Brazil, rain tends to be more sporadic and with lower volumes. Throughout the week, new instabilities should form over the South and advance through much of the Southeast. Still, the most intense storms and the highest rainfall accumulations are expected in the northern half of Minas Gerais, Espírito Santo, and Bahia.
