Moderate 30 to 60 mm Heavy 60 to 100 mm Extreme above 100 mm

NEXT 5 DAYS ANALYSIS

This Thursday, more persistent and intense rain is expected to hit Espírito Santo, northern Minas Gerais, and Bahia, with localized accumulations of 30 to 50 mm. Overcast conditions may limit field activities, but the rain is also expected to increase soil moisture. In São Paulo, southern Triângulo Mineiro and Cerrado, isolated showers are expected late in the day, with heat and maximum temperatures above 30 °C in many locations. On Friday, rainfall may exceed 50 mm in points along the border between Espírito Santo and southern Bahia, and continue intense in northern Minas and southern and western Bahia. São Paulo, southern Triângulo Mineiro, and the south should experience more sunshine and elevated temperatures through Saturday. Starting Sunday, rain is expected to advance further south in the Southeast, with episodes of moderate intensity. Early next week, rainfall should decrease in northern Minas, Espírito Santo, and Bahia, with more isolated showers and smaller accumulations.

RAINFALL FORECAST

Forecast daily accumulated rainfall (mm) for the next 5 days.

EXTENDED FORECAST ANALYSIS

In the second half of next week, rains are expected to intensify in south-central Brazil and advance over coffee-producing areas of Paraná, São Paulo, and southern Minas Gerais. Between Wednesday and Thursday (11/25 and 11/26), accumulations may locally exceed 50 mm in these areas. From Friday to Sunday (11/27 to 11/29), rainfall is expected to gain strength, especially in the

interior of Minas Gerais, where some locations may register over 100 mm, with risk of disruptions. Conversely, between Bahia, northern Minas Gerais, and Espírito Santo, more isolated showers and longer dry periods are forecast.
